How to include JavaScript in HTML

To include dynamic JavaScript code in an HTML page, code the [HTML <script> tag](#) in the [<head> section](#).

```
<a mode="pre" href="../../../tags/head-tag/index.html#syntax"><head></a>
  <a mode="pre" href="../../../tags/html-tag-list.html#metadata-content-model">... metadata content
  <a mode="pre" href="../../../tags/title-tag/index.html#syntax"><title></a><a mode="pre" href="
  ...
  <b mode="pre"><script type="text/javascript" src="..."></script>
  <script type="text/javascript">
    ... JavaScript code ...
  </script></b>
  ...
</head>
```

See the [<script> tag reference](#) for details on [how to code the <script> tag](#).

[onload Function Chaining](#)

[JavaScript escape vs. encode](#)

A comparison of the JavaScript functions [escape](#), [encodeURIComponent](#) and [encodeURIComponent](#) showing the difference between them.

[XMLHttpRequest](#)

XMLHttpRequest is a JavaScript object type that can be used to retrieve a resource via a URL. Despite the `<q>Http</q>` in the name of the type, an XMLHttpRequest object can be used to retrieve resources via various protocols including the

- http,
- ftp, and
- file protocols.
