[HTML <xml> Tag Deprecated](#)

Avoid the Deprecated <xml> Tag in HTML 5

The `<xml>` tag should be avoided because it has been deprecated. Any XML can be included by using an XML [top element](#) with an [xmlns attribute](#) and then transformed to HTML using a [<xml-stylesheet> instruction](#).

Note that this `<xml>` [tag](#), which should *not* be used, is not the same thing as the [<xml> declaration](#) which *does* still appear at the very beginning of documents using the current version of HTML code.
