HTML Character Entities

Quick Reference of Character Codes for HTML Special Characters

Character	Named Entity	Decimal	Hexadecimal
& - ampersand	&	&	&
< - less than sign	<	<	<
> - greater than sign	>	>	>
" - double quotes	"	"	"
' - apostrophe / single quote	'	'	'

Note that even the frequently-used ` ` is not even included above. Instead, the easiest HTML code to use for non-breaking space is ` `.

For all other special characters not in the list above, either include the declaration of the entity (ex: `<!ENTITY nbsp " ">`) in the internal subset of the [DOCTYPE declaration](#) or, better yet, use the numeric character entity references shown in the following table, which is probably more widely supported:
