The <command/> Tag in HTML 5

The <command> tag is one of the tags for interactive content in HTML.

back to top

<command/> Tag Syntax

Rules for coding HTML `command/` elements

```
<code mode="pre"><command .../></code>
```

<command/> Content Model

Contents of the command element

Content: *Empty.* All properties are coded using attributes.

Since the `<command/>` tag is a void element, it is not allowed to have any content, even HTML comments and therefore should always be coded as a self-closing standalone tag, ending with the delimiters `/>` rather than just `>` (`<command .../>`).

<command/> Tag Attributes

Attributes of the <command/> tag

global attributes	In addition to the personal attributes of the <command> tag below, any of the common HTML attributes can also be coded.
checked="checked"	
disabled="disabled"	
icon	a URI reference that resolves to the URL of a small two-dimensional image resource Use percent escape codes as explained in the URL-encoding tutorial for any special characters in the URI reference.

	If the value of the `icon` attribute resolves to an HTTP URL, it may contain any of the following components: 1. protocol scheme, typically `http:` or else `https:` 2. username, followed by an "@" 3. host name or IP address 4. port number, which defaults to 80 for the `http` scheme and 443 for the `https` scheme 5. absolute or relative path 6. search query, indicated by "?" If the protocol scheme, username, host name/IP address and port number are omitted the default is the current host - the same server as the base of the current document. If the path starts with a slash `/...`, it is an absolute path from the document root directory (AKA "<dfn>web root</dfn>") on the server. A relative path will be resolved relative to the base of the current document.
label	
radiogroup	
title	Although `title` is one of the common attributes, which can be coded on any HTML element, it performs somewhat differently when coded on the `command` tag.
type="command" type="checkbox" type="radio"	

<command/> Tag Examples

Examples of the `command` element in HTML 5

Changes in HTML 5 - <command/> Tag

What's new in HTML 5

The <command> tag is one of the new elements in HTML 5.

Differences between HTML 5 and earlier versions of HTML

The <command> tag did not exist in older versions of HTML.

The 2000-2010 Recommendations from the W3C HTML Working Group defined the HTML namespace for the names of all HTML element types, which now includes the **command** element name. In older (pre-2000) versions of HTML, element type names were not associated with a namespace.
