The <strong> Tag in HTML 5

The <strong> tag indicates that the content has increased importance for some reason. The **strong** element is one of the phrase elements in HTML. The appearance of text enclosed within a `strong` element is often rendered with a bold font, the same as for the HTML <b> tag, which does not imply increased importance.

<strong> Tag Syntax

Rules for coding HTML `strong` elements

```
<a mode="pre" href="../body-tag/index.html#syntax"><body></a>
    ...
    <a mode="pre" href="../html-tag-list.html#phrasing-content-model">... phrasing content expe
    ...
 </body>
```

Rules for coding the HTML `strong` element

Make sure you understand the difference between a tag and element and are familiar with the definitions of namespace and other HTML terms.

1. Code the **strong** element for strong emphasis where phrasing content is expected.
2. Begin the **strong** element with a starting <strong> tag. The element name uses lower case letters and should be in the HTML namespace, which it will pick up automatically from the `xmlns` attribute on the <html> tag.
3. Include any HTML global attributes on the <strong> tag as appropriate.
4. Inside the **strong** element, between the starting `<strong>` tag and the ending `</strong>` tag, code the inner HTML phrasing content.
5. End the **strong** element with a matching `</strong>` closing tag.

Content Model

The content of the **strong** element can include HTML comments, text content and only those HTML tags that can be used in phrasing content.

What's new in HTML 5

Differences between HTML 5 and earlier versions of HTML

The 2000-2010 Recommendations from the W3C HTML Working Group defined the HTML namespace for the **strong** element type name along with the names of all HTML element types. In older (pre-2000) versions of HTML, element type names were not associated with a namespace.
