### The <tfoot> Tag in HTML 5

The <tfoot> tag is used to create a table footer in HTML. For example, the footer can include a total of the numerical values in a column or some other column summary for non-numerical columns. When the table spans multiple pages, such as when a large table on a web page is printed, the table footer code within the **tfoot element** will appear on each page below the [table body](#).

	Multiple Column Heading	
First Column Heading	Second Column Heading	
Row 1	Row 1 Column 1	Row 1 Column 2
Row 2	Row 2 Column 1	Row 2 Column 2
#This is an example of an HTML table footer.#		

This is an actual working demo of the [table footer example code](#) below. (Do *View Source* to verify that this page is using the [HTML 5 DOCTYPE](#). You can also verify it is [Valid HTML 5](#) using the [HTML Validator](#). Try using it to validate URLs with HTML examples from other places that claim to be HTML 5 web sites!)

See the tutorial on [Creating HTML Tables](#) for full details on [how to create an HTML table](#) using the [HTML table tags](#) together.

### <tfoot> Tag Syntax

```
<a mode="pre" href="../body-tag/index.html#syntax"><body></a>
  <a mode="pre" href="../html-tag-list.html#flow-content-model">... flow content expected ...
  <a mode="pre" href="../table-tag/index.html#syntax"><table></a>
    <a mode="pre" href="../thead-tag/index.html#syntax"><thead></a>
      <a mode="pre" href="../tr-tag/index.html#syntax"><tr></a>
        <a mode="pre" href="../th-tag/index.html#syntax"><th>...</th></a>
        ...
      </tr>
    </thead>
    <a mode="pre" href="../tbody-tag/index.html#syntax"><tbody></a>
      <a mode="pre" href="../tr-tag/index.html#syntax"><tr></a>
        <a mode="pre" href="../td-tag/index.html#syntax"><td>...</td></a>
        ...
```

```

    </tr>
  </tbody>
  <b mode="pre"><tfoot></b>
    <a mode="pre" href=" ../tr-tag/index.html#syntax"><tr></a>
      <a mode="pre" href=" ../td-tag/index.html#syntax"><td>...</td></a>
      ...
    </tr>
  <b mode="pre"></tfoot></b>
</table>
</body>

```

As shown in [HTML Table Tutorial - How To Create Tables in HTML](#) the <tfoot> tag comes *before* the <tbody> tag for the [HTML table body](#). This is because when the table is displayed on multiple pages, such as when printing web pages, the table footer will appear at the bottom of those rows of a table that fit on a page, before the rest of the body of the table has been rendered.

### Rules for coding the HTML `tfoot` element

- 

### Child Elements of the <tfoot> tag

#### <> tag(s)

A <tr> tag for each table row with <td> tag(s) for each table cell in the table footer.

## <tfoot> Tag Examples

### Examples of the `tfoot` tag in HTML 5

Here is the HTML code for the [table demo](#) above:

```

<table>
  <caption>Table Caption</caption>
  <colgroup>
    <col style="width: 20%" />
    <col style="width: 80%" />
  </colgroup>
  <thead>
    <tr>
      <th rowspan="2"></th>
      <th colspan="2">Multiple Column Heading</th>
    </tr>
    <tr style="vertical-align: bottom">
      <th>First Column Heading</th>
      <th>Second Column Heading</th>
    </tr>
  </thead>
  <b mode="pre"><tfoot></b>

```

```
<tr><td colspan="2">This is an example of an HTML table footer.</td></tr>
<b mode="pre"></tfoot></b>
<tbody>
  <tr>
    <td>Row 1 Column 1</td>
    <td>Row 1 Column 2</td>
  </tr>
  <tr>
    <td>Row 2 Column 1</td>
    <td>Row 2 Column 2</td>
  </tr>
</tbody>
</table>
```

---

## Changes in HTML 5 - <tfoot> Tag

### What's new in HTML 5

#### Differences between HTML 5 and earlier versions of HTML

The [2000-2010 Recommendations from the W3C HTML Working Group](#) defined the [HTML namespace](#) for the **tfoot** element type name along with the names of all [HTML element types](#). In older (pre-2000) [versions of HTML](#), element type names were not associated with a namespace.
