## The <text-decoration> Property

### The <text-decoration> property

#### Examples

```
<a style="text-decoration: none" ...>(hidden link)</a>
<span style="text-decoration: blink">blink</span>
<span style="text-decoration: line-through">this got deleted</span>
<span style="text-decoration: overline">denominator</span>
<span style="text-decoration: underline">seriously</span>
a.nounderline {
text-decoration: none;
}
span.strikethrough {
text-decoration: line-through;
}
```

## The <white-space> Property

### The <white-space> property

The possible values of the white-space property are:

#### inherit

use the value of the white-space property from the style attribute coded on the current element's parent or inherited from one of its ancestors

#### normal

#### nowrap

#### pre

#### pre-line

#### pre-wrap

#### Examples

To prevent text from potentially wrapping at an inappropriate place, you can code the white-space: nowrap property. This example is an alternative to coding &nbsp; (non-breaking space).

```
<span style="white-space: nowrap">12:00 pm</span> is noon
```

Since HTML coders should avoid the [deprecated <nobr> tag](#), you can include white-space: nowrap in a CSS file, and code <span> tags with class="nobr" instead:

```
<span class="nobr">12:00 am</span> is midnight
```

```
.nobr {
white-space: nowrap;
}
```

### Gray Scale Color Codes

(TO  
DO)

Red = 00

Green Blue =  
00

00

33

66

99

cc

ff

### HTML Color Chart

33 66 99 cc ff
